Abstract (en)

[origin: WO2009133286A1] The invention relates to a method for managing a heating device (1), said device being connected to an electric power supply. This method particularly comprises: A step (41) during which an order placer (6) sends a general electric power cut order to a managing device (4), said managing device being connected to one or more heating appliances (2, 3); a step (42) during which the managing device sends a customized electric power cut order to a heating appliance (2), said appliance comprising at least two heating elements (5), at least one of said heating elements operating from an electric power source; a step (47) during which the heating appliance executes the customized power cut order on the basis of internal parameters (20) and characteristics (16) of each heating element, this execution including predetermination of a separate working rate for each heating element.
