Abstract (en)
[origin: EP2275382A2] A saddle comprises a saddle tree 2 with a pommel 3 and a cantle 4 which are mutually connected by a connecting part 5. The pommel 3 comprises at least a part of a saddle head 6 and a pair of saddle tree points 7 hanging downward on either side thereof. The saddle tree points 7 are pivotable in a width direction relative to the at least part of the saddle head 6. The saddle is thus adjustable for the purpose of a wider-ranging application on load-carrying animals without the sitting comfort of the saddle changing for a rider.
