Abstract (en)

[origin: EP2275611A1] The assembly has two profiles (100a, 100b) provided with faces that are arranged relative to each other. One of the profiles comprises a projection at a distal end at which a fixation groove (121b) of a joint (200) is connected. The other profile comprises a projection. The joint binds the profiles along total length. The joint is equipped at an end with a foot (210) to fix in the fixation groove and another end of a round form (220) cooperating with the distal end of the projection to form an annular linear connection.
