Abstract (en)  
[origin: EP2275613A2] The formwork has a groove (6) provided in folds facing a folding surface of a substructure (1). A fastening element (3) has a retaining plate (7) that overlaps adjacent profile projection (4), where the plate is gripped into the groove. The plate bears a connector pin (8) between profile elements (2), where the pin extends towards the substructure. An anchor base (9) is arranged at an end of the pin that is turned away from the plate. The base is gripped in a rectangular retaining slot (10) of the substructure and is fixed with the slot by rotation of the plate.
