Abstract (en)

[origin: EP2275630A2] The fitting has a drive device comprising an actuator (15) driven in a longitudinal direction of a connecting rod and arranged opposite to the connecting rod. Pins (17) arranged on the connecting rod penetrate into a recess (16) in a position in which a leaf rests at a frame. The actuator stays in connection with fluid subjected with pressure. The drive device has a pressure medium source for conveying fluids to pistons (19, 20). The pressure medium source is connected with a module (9) with the actuator by pressure medium lines.
