Abstract (en)

[origin: EP2275769A2] The weapon (100) has a fire guidance device (1) fastened to the weapon such that the fire guidance device swivels or twists automatically or manually relative to an axis of the weapon. The swiveling of the fire guidance device is performed based on a required set-up angle of the weapon such that a direct view toward a target via the fire guidance device is preserved for an operator of the weapon. The fire guidance device comprises an angle coder for determining an adjusted set-up angle that is displayed using an LED.
