Abstract (en)
[origin: WO2009116997A1] An oral care implement demonstration assembly includes a powered oral care implement, a package housing and a plurality of demonstration elements. The oral care implement demonstration assembly is configured to produce a visual demonstration effect when relative movement is provided between a first demonstration element and a second demonstration element. Among the visual effects that may be utilized is a Moire effect. Additionally, an associated method for demonstrating features of an oral care implement though one or more visual effects is described herein.
