Abstract (en)

[origin: US2011031264A1] A dispensing system for dispensing cut lengths of a strip of paper includes a box configured to contain the cut lengths of a strip of paper. The box is made of semi-rigid material that dispenses individual cut lengths through a dispensing slot, the cut lengths of a strip of paper being made up of cut lengths held together by joins, and the dispensing slot being narrower in width than a width of the strip of paper. The box includes a guide means for guiding the strip of paper, the guide means being formed of two wall elements forming a narrow space through which the strip of paper is guided and held in contact with as far as the dispensing slot, the narrow space being formed by folding a panel of the box about a fold line in which the dispensing slot is formed.
