Abstract (en)
[origin: WO2009124867A1] The invention relates to a refrigerating appliance comprising a cold and/or freezing compartment having a rear wall (3), a door and lateral walls (1, 2). The lateral walls (1, 2) comprise guides along which the bottom (4) of a compartment can be pulled out like a drawer. According to the invention, each lateral wall (1, 2) comprises at least two holding projections (5, 6, 7, 8) arranged at the same height and at a distance from each other in the direction (17) of the depth, and the compartment bottom (4) is supported on the projections in a mobile manner. An individual guiding element (10, 11) or at least two guiding elements (10, 11) at a distance from each other are arranged along only part of the depth of the bottom (4) of the compartment, said guiding element(s) limiting the movement of the compartment bottom (4) supported on the holding projections (5, 6, 7, 8), transversally, especially perpendicularly, to the direction of movement thereof.
