Abstract (en)

[origin: WO2009135549A1] The invention relates to a mobile measuring system for measuring profile cuts of an object and/or space, comprising at least one non-rotatably mounted and contact-free distance meter, a first deviation device or splitting device which deviates a measurement signal emitted by the distance meter or splits it into different directions, a swiveling device for swiveling the deviation device or splitting device about a first axis and a height-adjusting device for adjusting the height of the deviation device or splitting device.
