Abstract (en)
[origin: EP2277431A2] The household device has a control device (27) for performing rinse cycles, which are adjusted by the control device using cleaning agents e.g. additives. An analyzing unit (29) detects the cleaning agents and is provided with a reading unit for radio frequency identification of barcode or other identification marks printed on the cleaning agents. The analyzing unit is connected with the control device for transmitting analyzing data from the analyzing unit to the control unit. The analyzing unit is formed with a turbidity sensor.
