Abstract (en)
[origin: EP2277626A2] The rotor (1) has hammer tools (2) radially distributedly fixed over a periphery. The tools are held between rotor disks (5) by hammer rods (8). The rods pass through the tools and the rotor disks with retaining bushes (6). The tools are provided with retainers, which are axially aligned towards the retaining bushes. The retainers form a support for the hammer tools on the retaining bushes in a mounting position of the tools at the rotor and in a demounting position of the tools from the rotor when the hammer rods are not inserted in the rotor.
