Abstract (en)

[origin: WO2004052552A1] The aim of the invention is to provide a spray gun which allows for a simple and fast change of color during spraying. For this purpose, a single-walled spray gun container has a paint-receiving section which is substantially accessible through two main openings and which has at least one supplementary access to the paint-receiving section. Said supplementary access is reclosable by means of a closure. Said closure is at least partially disposed inside the supplementary access when the supplementary access is closed.
