Abstract (en)

[origin: EP2277674A2] The tool such as saw (7), has a counter notch and a clamping surface, which are provided a defined position, where the counter notch is adapted to a locking element (15). The locking element and the counter notch combinely form a form-fit lock fixing device. A clamping element (16) and clamping surface combinely form a force-fit clamp fixing device. The locking element and the clamping element are partially coupled together in an actuated manner and are automatically locked at actuating positions of the locking element and the clamping element.
