Abstract (en)

[origin: EP2277700A1] The method involves carrying a tubular blanket (4) by a blanket cylinder (BS1) of a printing group (1). A back pressure zone is provided in the blanket cylinder. Duration of angular printing speed of the blanket cylinder of the group is higher than or equal to that of another blanket cylinder (BS2) of another printing group (2). The blanket cylinders and a plate cylinder (PS1) are adjusted. An impression cylinder (BI1) and the former blanket cylinder are adjusted, where the blanket cylinders are adjusted with each other. A rotary press (10) is adjusted with a paper band (6). Independent claims are also included for the following: (1) a device for adjusting angular speed of printing cylinders in a printing machine (2) a software comprising set of programs to execute a method for adjusting angular speed of printing cylinders in a printing machine.
