Abstract (en)

The panel (10) has an electrically conductive coating (5) applied to a side of the panel, and a porous contact partially brought on the electrically conductive coating and formed as a spray-coating. The contact exhibits total thickness of 0.05 to 0.3 mm, and is formed from a material selected from tin, zinc, silver, palladium, aluminum, tungsten, rhenium, tungsten-rhenium, molybdenum, molybdenum-rhenium, or rhodium. The electrically conductive coating is formed from indium tin oxide, tin oxide, zinc oxide, or cadmium stannate. The contact is attached in the form of a contact strip or busbar. Independent claims are also included for the following: (1) a window comprising an intermediate space filled with inert gas (2) a method for electrically contacting an electrically heatable glass panel.

Abstract (de)

Die vorliegende Erfindung betrifft eine elektrisch beheizbare Glasscheibe (10), umfassend mindestens eine auf mindestens einer Seite der Glasscheibe aufgebrachte elektrisch leitfähige Beschichtung sowie mindestens eine zumindest bereichsweise auf der Beschichtung aufgebrachte Kontaktierung wobei die Kontaktierung als Sprühbeschichtung ausgebildet ist.
