Abstract (en)

[origin: WO2009138292A1] A method for error handling for a control device for a passenger protection system and a corresponding control device are proposed, wherein the error handling is carried out by at least one function of the control device being switched off as a function of a detection of an error. Switching off takes place immediately after the detection of the error, qualification of the error taking place once the function is switched off.
