Abstract (en)  
[origin: WO2009130177A1] The invention relates to a resealable bag (20), wherein a zipper (Z) is provided on the inner surface of the plastic film, and the two parts of the zipper (Z) are attached at the opposite inner surfaces (50) of the bag (20), wherein the zipper (Z) is connected to the inner surface (50) of the plastic film such that clearances (15, 13) remain between welded regions (12, 14) between the zipper (Z) and the inner surface (50) of the plastic film in the longitudinal axis of the zipper (Z), for forming a seal-free longitudinal channel, and in the transverse axis of the zipper (Z) for producing free air and steam penetration openings at defined intervals between the zipper (Z) and the inner surface (50), through which openings steam can penetrate, wherein the ends of the openings facing the interior (60) of the bag (20) are greater than the ends of the openings facing the exterior (70) of the bag (20).
