Abstract (en)
[origin: EP2279786A2] The device has a head connected with a container i.e. bottle (15), by a defined vent and comprising a support i.e. capsule holder, with an opening device e.g. pin holder (22), puncturing pin (23), impact plate (24) and holder ring (25), for a compressed-gas container i.e. carbon dioxide capsule (1). Pressure gas contained in the compressed-gas container is transferred into the former container by the head. The support and the opening device are arranged at the head in such a manner that the compressed-gas container is opened by a sealed connection of the head with the former container. An independent claim is also included for a method for carbonization of fluid in a container i.e. bottle.
