Abstract (en)  
[origin: EP2279832A2] The insert (100) has multiple of foam knobs (106) fixed at a foam supporting path (104) in individual removable manner. The knobs protrude over the supporting path. The knobs are removed from the supporting path in a user-sided manner. A knob-free area of the supporting path is configured for receiving of an article i.e. tool (102). A receiving cavity is molded on the supporting path and defined for receiving of the article. The receiving cavity is limited by the knobs. The supporting path has a color, and the knobs have another color that is different from the former color. An independent claim is also included for a method for user-sided configuration of the insert.
