Abstract (en)

[origin: EP2279957A2] The box has walls (2-5) made of virgin fiber board, and a polyolefin layer provided at an inner side (32), which defines volume for receiving deep-frozen food. A tear-off strip (28) extends into the walls, which include an elongated recess (33) provided at the inner side along the tear-off strip. A reinforcement strip (34) is arranged in the elongated recess, and is connected with the polyolefin layer. A maximum thickness of the reinforcement strip corresponds to a depth of the elongated recess. Independent claims are also included for the following: (1) a layout for producing a folding box (2) a device for producing a foldable sheet material for forming a folding box.
