Abstract (en)

The invention provides a hinge for pivotally connecting a first panel to a second panel. The hinge has a first hinge member for connection to the first panel and a second hinge member for connection to the second panel. The hinge has a connector between the first hinge member and the second hinge member, the connector allowing the first hinge member to pivot with relation to the second hinge member. The connector is mounted in a track formed in the first hinge member and is selectively movable therein to vary a position of the first hinge member with relation to the second hinge member. The invention also provides a kit of hinges for pivotally mounting a first panel to a second panel and a clamping arrangement for mounting a panel to a wall.
