Abstract (en)  
[origin: EP2280264A1] Repeatability of an unbalance measurement device is properly checked. A reference vibrator 10 of the present invention includes: a vibrator body 11 configured to be mounted to a mount 4 in an unbalance measurement device 1 to which a rotary product is mounted at the time of unbalance measurement, in a same mounting state as the rotary product; a vibration generator 12 that is fixed to the vibrator body 11 and applies vibrations to the vibrator body 11; and a control unit 13 that controls the vibration generator 12. Since vibration is caused by the vibration generator 12 fixed to the vibrator body 11, repeatability of a vibration force is high. This makes it possible to apply vibrations for repeatability check to the unbalance measurement device 1 with an accurate vibration force. Thus, variations in vibration force can be eliminated, and the repeatability of the unbalance measurement device 1 can be properly checked.
