Abstract (en)  
[origin: EP2280401A1] The line has two leads (1, 2) stranded with each other and comprising electric conductors (6) surrounded by insulations (7). Filling elements (3, 4) are stranded with the leads, and are arranged in a gore between the leads. The leads and the filling elements are combinedly surrounded by a casing (5) that is made of an insulation material. The filling elements are made of an elastic material i.e. elastomer plastic, and are held between the leads and casing in a stretched condition. A textile thread is wound around each of the filling elements. An independent claim is also included for a method for manufacturing an electric line.
