Abstract (en)
[origin: EP2280426A2] Disclosed are a light emitting device and a method of manufacturing the same. The light emitting device includes a support substrate, a wafer bonding layer over the support substrate, a second electrode layer, which includes a current blocking layer and a reflective current spreading layer, over the wafer bonding layer, a current injection layer over the second electrode layer, a superlattice structure layer over the current injection layer, a second conductive semiconductor layer over the superlattice structure layer, an active layer over the second conductive semiconductor layer, a first conductive semiconductor layer over the active layer, and a first electrode layer over the first conductive semiconductor layer.
