Abstract (en)
[origin: WO2009118456A1] The invention relates to a pipette comprising a volume adjustment mechanism, with which the stroke of piston may be changed by turning the rod. The rod (10) comprises a knob (11) having a lower position and an upper position so that when the knob is rotated, in the lower position the rod does not rotate with the knob but in the upper position it rotates. So the change of volume setting by accident is prevented.
