Abstract (en)

[origin: WO2009134129A1] The present invention relates to a device for containing and dosed delivering of at least one fluid. The device comprises for this purpose a container with at least one compartment for the fluid to be delivered and at least one controllable dosing device connected to a compartment for delivering a dosage of fluid from said compartment after operation of the dosing device, wherein the at least one dosing device is provided with setting means displaceable by operation, and the at least one dosing device is adapted to deliver a variable dosage of fluid subject to the position of the setting means.
