Abstract (en)

[origin: WO2009127535A1] The invention relates to a refrigerator (1) comprising an external housing (2), at least one container (3) for products to be refrigerated having at least one refrigeration compartment (4) for accommodating products (5) to be refrigerated, and a cooling circuit (6) for cooling the refrigeration compartment (4), wherein the cooling circuit (6) has an evaporator (7) with a substantially two-dimensional evaporator surface (17) and the evaporator is arranged on an inner wall (10) of the container (3) for products to be refrigerated, wherein a sub-area (8) of the evaporator surface (17) is bent towards the inner wall (10) and the evaporator (7) with the bent sub-area (8) is connected to the container (3) for products to be refrigerated, and said refrigerator is distinguished by a high degree of efficiency, the ability to be cleaned easily and simple mounting. The invention also relates to a plate-like evaporator (7) which is particularly easy to clean and simple to mount and has a high degree of efficiency, and also to a method for mounting a refrigerator (1).
