Abstract (en)
[origin: WO2009137855A1] The invention relates to a method for determining physicochemical properties of solids, such as tablets, powders or granulated materials. According to said method, a solid is subjected to near-infrared spectroscopy, during which at least two characterisation features of the solid are determined. The characterisation features can be chemical and physical characterisation features, and the physical characterisation features can be particle size, specific surface and porosity.
