Abstract (en)

[origin: WO2010020327A1] An improved beam forming device for an outdoor antenna and/or roof antenna is characterized by the following features: the parasitic beam forming device (27) is located at a distance below the top surface or external surface of the electrically non-conductive zone of the vehicle chassis; the parasitic beam forming device (27) is formed, provided, or mounted within the material of the electrically non-conductive zone of the vehicle chassis or on the bottom side or internal side of the electrically non-conductive zone of the vehicle chassis; the parasitic beam forming device (27) is arranged and/or designed in such a way that at least some sections thereof laterally project from and/or are arranged laterally from the antenna mounting zone or section and/or an optionally provided balancing antenna surface (13).
