Abstract (en)

[origin: EP2281615A2] The aid (12) has a plate section (26) with a support surface (20) for a heel section of a ski boot or a boot plate. A control element e.g. piston cylinder assembly, has a base part fastened to a ski (16) or a ski binding, and a movement part movable relative to the base part. Support elements (18, 30) convert movement of the movement part into movement of the plate section such that level of the surface over the ski is changed. A locking arrangement transfers the movement of the movement part into locking or unlocking of the aid to lock or unlock the adjusted level of the surface over the ski. An independent claim is also included for a tour ski binding including a front binding part.
