Abstract (en)

[origin: DE102009034589B3] The arrangement has a dome with a dome element and a rotor which is made of a magnetizable material. A moving device has a magnetic device (14) which is placed at a position corresponding to the position of the rotor outside a workpiece (2). The rotor is displaced into the workpiece by the magnet device. The workpiece is supplied to a bending head for bending and is supported from inside by a dome in the bending region during the bending process.
