Abstract (en)
The invention relates to a household appliance for vacuum-packaging products, comprising a casing (2) and a lid (1) provided with complementary sealing means (6) which can be opposite one another when the appliance is in the closed position, a vacuum pump (41), and heat-sealing means (43) for closing the bag containing the product to be packaged once the vacuum has been formed therein. The invention essentially has guiding means for the linear movement of the lid (1) with respect to the casing (2) between an open appliance position and a closed appliance position, the lid (1) being arranged substantially parallel to the closure plane in both positions; and push means which act on the guiding means for guiding the lid (1) and which tend to keep said lid (1) in the open appliance position.
