Abstract (en)

A coupling device (1) for coupling a fibre band (10) to a building construction is disclosed. The fibre band (10) comprises a bundle of substantially continuous fibres, e.g. carbon fibres. The coupling device (1) comprises a connecting part (2) and a retaining part (4). The connecting part (2) is arranged to be connected to a part of the building construction, and the retaining part (4) is arranged to retain an end part of a fibre band (10) at least partly by means of friction between the retaining part (4) and the fibre band (10). Thereby the fibre band (10) can be securely connected to a building construction without causing damage to the fibre band (10).
