Abstract (en)

[origin: EP1793061A2] The strip has a base area (20) mounting an expansion strap (24), and a confining area (22) inhibiting from an expansion of the strap in a confining condition of the strap. The confining area is brought into a release condition which releases the strap for the expansion by a user of the strip. The strip is designed in such a manner that the strip is fixed in an integrated condition by connection with a thermal insulation. The strap makes possible expansion in a direction away from the thermal insulation and into an anti-surface (38) during the release condition of the confining area.
