Abstract (en)
[origin: EP2282135A2] The ventilator (1) has a propeller provided with a rotational axis, and a vacuum channel provided with an air suction opening (6) resting upstream of the propeller, for forming lateral air incident flow. A glass channel is provided with an air outlet opening resting upstream of the propeller, for forming lateral air outlet flow. A cover (3) is arranged in a housing (2). An air guiding unit (7) is arranged in a zone between a rear side of the cover and the propeller, and reduces or suppresses air flow around the rotational axis.
