Abstract (en)

[origin: EP2282157A2] The device (1) has an eccentrically mounted drive wheel (2) and a driver (9) that is embedded in a loading slide connected with a drive unit (4) e.g. chain, such that the loading slide is transported in and/or against a firing direction. A chain tightener is formed by the eccentrically mounted drive wheel. The drive unit is driven by a cam wheel. The driver includes a driver housing and a carriage in which a handle is expanded. End position sensors (5, 6) are embedded for detecting rear and front end positions of the loading slide. The drive unit is selected from a group consisting of a rope, belt and metal strip.
