Abstract (en)

[origin: EP2282321A1] The module (M) has a microprocessor circuit (42) accommodated in a box-shaped module housing (30) for processing output signals generated by a current sensor (43). An opening i.e. slot, is formed in the housing for mounting a current conductor (20). The housing is arranged perpendicular to the direction of the conductor and is formed as a wide as a switch pole (P) of a modular device that is mounted on a low voltage distributor. Connection elements i.e. hooks (32, 32'), are arranged on the housing for enabling detachable mounting of the measuring module with the voltage distributor. An independent claim is also included for a low voltage distributor with a set of sockets.
