Abstract (en)

[origin: WO2009118462A1] The invention relates to a game that comprises basic cubes having on each surface a flush magnetic element. The cubes define a rigid volume via juxtaposition, stacking, and magnetisation. The surfaces of each magnetic element correspond to a first group including surfaces flush with the visible (6) and non-visible (7) surfaces of the basic cubes, and second group including sides flush with the neutral complementary surfaces (8) of the visible or non-visible surfaces of the basic cubes with which the surfaces of the first group are flush. The surfaces of the magnetic elements of at least one of the two groups have the same polarity. It is thus possible, by consecutive rotations or turnovers of sub-assemblies of the volume, to change the visual appearance of said volume.
