Abstract (en)

[origin: WO2009143914A1] The invention relates to a method for stabilizing a driving movement of a two-wheel motor vehicle, such as a motorcycle, in which an angle of inclination of the motor vehicle relative to the carriageway is detected via inclination sensors and, after the angle of inclination is processed in a computer device, a control signal based thereon is supplied to a control device to bring about a stabilizing intervention in the driving movement, wherein the attitude angle of the motor vehicle is detected by means of at least one attitude angle detection sensor and is processed at the same time in the control device. The invention also relates to a method and a device which has means for carrying out said method.
