Abstract (en)
[origin: WO2009138628A1] The invention relates to a pressurized gas receiving device (700), particularly for a gas consumer (1600) such as an engine or a fuel cell, including a connection interface comprising at least one coupling member (22) intended for selectively coupling with a coupling member (202) combined with a gas dispenser (200), said receiving device (700) including a movable gas intake shaft (21, 44) defining a gas flow duct (211, 442), said duct having at least one downstream end (447) to be connected to a consumer (1600) and one upstream end (219) to be connected to a gas dispenser (200), the intake shaft (21, 44) being selectively movable relative to the coupling part (22) between at least two stable positions: a first downstream reference position and a second upstream protruding position.
