Abstract (en)
[origin: JP2009250603A] <P>PROBLEM TO BE SOLVED: To provide a managing method for utilizing a characteristic of respective heating units of a heater having at least two heating units. <P>SOLUTION: A heating system 1 includes a device 12 connected to or incorporated into at least one heater 2 and adjusting the room temperature 8. The heater includes at least two heating units 5. The adjusting device calculates the requirements for heat. Its calculation result is sent to the heater, and its heater is further impressed on its heating unit, and similarly operates the respective heating units. However, there are a case where a plurality of heating units in the same heater are a different property or form and/or a case having a different output value. Thus, heat radiation is assigned between the plurality of heating units as a function of a parameter 30 capable of optimizing use of the heating units. <P>COPYRIGHT: (C)2010,JPO&INPIT
