Abstract (en)

[origin: WO2009146827A1] In a radiation source (1) and a method for generating x-ray radiation (2), a fluid (9) is disposed in a fluid line (10) and is completely surrounded by the fluid line (10) in the direction of an evacuated chamber (3). Part of the fluid line (10) is configured in a manner that is pervious to an electron beam (6) such that the electron beam (6) extending through the chamber (3) may enter through the fluid line (10) and may interact with the fluid (9) for generating the x-ray radiation (2) in an interaction zone. The radiation source (1) enables good heat removal from the interaction zone and prevents fluid (9) from entering the chamber (3).
