Abstract (en)
[origin: WO2009135621A1] The invention relates to a housing foil for galvanic elements, comprising a barrier layer with a polymeric structure, deposited from a gaseous phase onto a carrier layer and to a galvanic element with at least one positive and at least one negative electrode, said element having at least one foil of this type. The invention also relates to a method for producing a galvanic element, in which at least two electrodes are applied next to one another on a substrate and are covered by a foil. A housing foil of this type is used for the substrate and/or the foil.
