Abstract (en)

[origin: EP2283937A1] The method involves passing a sample of a classification medium with a transporting object (Ps-a,Ps-b), where the classification medium has an image recording device (1) and an assembly unit (3). The image recording device produces an image (Abb-a,Abb-b) from each object of the sample. A sorting system is equipped for triggering the transport of one object to a target point. An independent claim is also included for a device for transporting goods to target points.
