Abstract (en)

[origin: EP2283979A2] The tool (10) has a housing (12), and a motor shaft coupled with a drive motor. A working spindle is driven around a longitudinal axis in a rotatably-oscillating manner. A coupling unit is driven by the motor shaft, and has a closed guiding surface, where the surface is coupled with a carrier over a transmission unit. The carrier is held in a movable manner relative to the working spindle and engaged into a circumferential area of the working spindle for driving the working spindle in the rotatably-oscillating manner.
