Abstract (en)

[origin: EP2284085A1] The method involves dividing an interior of a container into individual compartments by separating webs. A sealing film is closely applied on the separating webs at a surface of a product after attaching the film to the container. The film is sealed on an outer edge of the container using a sealing tool (7) with a planar lower side (7a) independent of the number and location of the separation webs and the outer contour and size of the container, where the size of the webs is smaller than an outer edge of the container. An independent claim is also included for a readymade meal packaged in a cup-shaped container.
