Abstract (en)

[origin: EP2284095A1] The packing (1) has a label (2) applied on a packing body (3), where a pre-cut opening (31) is provided in the body and closed with a cover that is detachably connected with the body. The opening is covered with the label that comprises a carrier layer (21). The carrier layer is partially and adhesively attached such that the carrier layer and parts of the carrier layer overlap with the opening, and are glued on an anti-adhesive surface. Foils made of polypropylene, polyethylene and polyethylene terephthalate are used as the carrier layer. An adhesive coating comprises a silicone layer. An independent claim is also included for a method for producing a packing.
