Abstract (en)

[origin: EP2284108A2] The device (1) has an inlet (8) assigned to drive and pressure rollers (33, 34) that are driven using adjustable rotational speed. An outlet (9) is assigned to other drive and pressure rollers (35, 36) that are driven using another adjustable rotational speed. A continuous foil (4) is guided between the drive and pressure rollers. Movable foil guiding systems (31, 32) are arranged for adjusting an amount of part of the continuous foil in cooperation with the drive and pressure rollers and gravitational force (g). An independent claim is also included for a method for manufacturing a barrel.
