Abstract (en)
[origin: EP2284331A2] The body (10) has a stop (20) for attachment of a formwork element to the body, and a thrust bearing (30) for attachment to a fastening element e.g. screw. A support (40) attaches the body to an underground, and a support base (50) supports the body on the underground. The support base has a reinforcement rib (60) that projects from the support base spaced away from the stop and deviates from a center-of-gravity plane spanned by centers of gravity of the thrust bearing, the support and the support base. The base has a bearing surface (80) for supporting on the underground. The thrust bearing serves as a contact surface for a head of the fastening element.
